

FLORAL SNIPS

Do not use scissors! You'll squash the flower stem preventing it from drinking water (and then the flower will die) No Bueno! Only use scissors for cutting ribbon. We prefer a floral pruner or shear (something with a curved blade) as they give a clean cut.

FLORAL TAPE

Wet floral tape is water resistant, meaning it won't lose its adhesive quality when it gets wet. You will need this on vases. (Our tutorials will demonstrate what we mean here.) Stem wrap is a lightweight adhesive tape that goes around your bouquets and boutonnieres to keep all of the delicate stems bound together before you cover them with ribbon.

FLORAL GLUE

There is a difference between floral adhesive glue and hot glue. The difference is in how they dry and how they affect the flowers. Hot glue can burn flower stems making it wilt faster. Also, if you put hot glue in a fridge, the natural flower/stems will contract and pull away from the glue and your hair combs or flower crowns will fall apart. The floral adhesive acts more like a rubber cement in that it is flexible and it adheres to itself. It's also more flexible and more forgiving with the flowers/greenery. If you put it in a cooler/fridge it will move with the product as it contracts but it won't separate from it.

FLOWER FOOD

Although not required for your wedding flowers to thrive, flower food can help extend the life of cut flowers. Mainly used by retail florists to extend the life of arrangements, DIY clients can use it if they choose to. Follow instructions on items purchased.

FLORAL FOAM

If you are working with floral foam, make sure you soak it well. Do not press it down into the water or the foam will get air bubbles and appear wet on the outside but be bone dry in the middle! Simply gently place the foam in a bucket of water and let it absorb the water on its own. Once it sinks to the bottom it's soaked. Here's a visual for you at the start of [this tutorial](#) :)

RIBBON

You'll need a few different widths of ribbon for different purposes.

- 5/8" for corsages and boutonnieres
- 1/2" - 1" for bridesmaids
- 1" for Bridal (or a mixture of ribbons and sizes)
