PRO TIPS ON

TRANSPORTING FLOWERS

You'd think transporting flowers was relatively simple, but anyone that has done it before will tell you it can be a stressful task! Here's some tips to make it a little easier for you.

- Use our Flower Checklist.
- Boxes help stabilize the flowers while on the road to keep them from tipping. If you had your flowers shipped: Keep the boxes the flowers came in. Pad between arrangements/vases with towels or newspaper.
- Don't overcrowd arrangements in the box. Doing so will snap heads off flowers and snap stems. Everyone needs a little space on a road trip!
- Ask local liquor stores for boxes, especially wine boxes as they come in handy for bud vases. You can cut down boxes for transportation. You'll want the box to be at the same height as the vases are so you don't smash the flowers. You can also use laundry baskets.

HELPFUL TIP: Always make sure your boxes are sturdy enough to carry vases of flowers & water as they can get **HEAVY!** If the box has a fold out bottom, you'll need to reinforce that baby **BIG TIME**. Our recommendation is to only use those types of boxes for transporting in a vehicle and not for carrying the vases into the venue. We have had many boxes collapse on us and it was **NOT** good.

- Pack the boxes snug. If you are transporting arrangements out of boxes, nestle closer together so they support one another (but make sure blooms are not smashed).
- You may use your own car but put a tarp or towels down to protect your car from any water and flower spillage.
- For larger weddings, you may need a larger vehicle to cut down on the number of trips you'll need to take from your home (or wherever you are doing your flowers) to the venue. In larger events you may even rent a U-haul van (cheap only \$19.99 rental and mileage!).
- When transporting tall vases, take the dish or lomey bowl off the tall stand and transport low.
- Take your time and drive slow! Take turns slow to ensure that the flowers shift/slide as little as possible and it cuts down on spillage!

TRANSPORTATION CHECKLIST

Print off this worksheet for each of your transportation helpers along with the diagram.

EXAMPLE VENUE DIAGRAM

Remember to make an centerpiece placement diagram so the arrangements are placed in the correct locations at the venue!

Here is an example diagram:

A	Centerpiece 1 (low centerpiece)
B	Centerpiece 2 (tall Centerpiece)
C	Centerpiece 3 (3 bud vases/table)
D	Arrangement 1
E	Bridesmaids Bouquet (repurposed)
F	Ceremony Backdrop (repurposed)

1. Get a copy of your venue layout or sketch a quick one (doesn't have to be perfect!)
2. Assign each arrangement a letter or number.
3. Make a quick legend describing which arrangement is assigned to each letter or number.
4. Create diagram like example below. May be more elaborate or simple than the example given. Just use what you need for your wedding!
